***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-11, drawn to a process for measuring viscosity of a culture.

Group II, claim(s) 12-23, drawn to an apparatus for measuring viscosity of a culture.

The groups of inventions listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The common technical feature in the two Groups is a magnetic particle in a fluid which has a magnetic field applied to it and motion is optically detected in order to determine viscosity.

Seitz (3,635,678) entitled "Clot Timing System and Method" teaches in claim 1, an apparatus for determining viscosity in a fluid with a magnetic member suspended in the fluid, a magnetic field applied, and optically determining the movement of the member.

The common technical feature is not a contribution to the art.
